Long-term potentiation (LTP)

Protein synthesis is required!

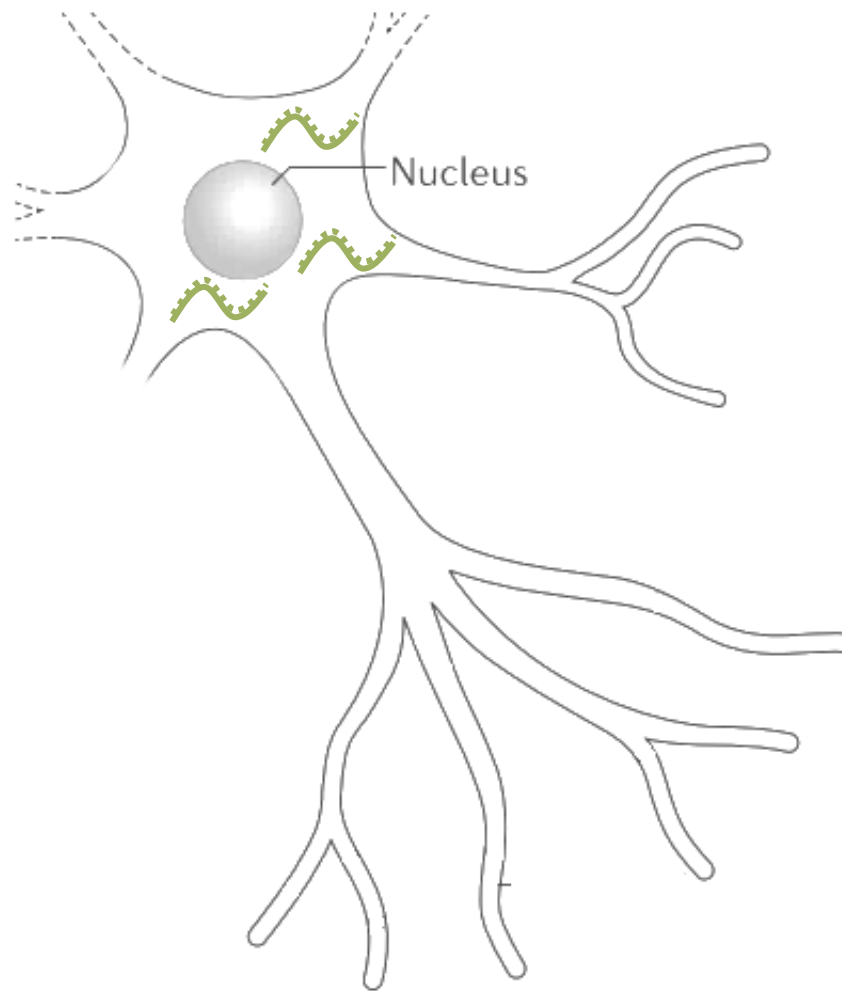

Long-term potentiation (LTP)

Protein synthesis is required!

Distributed production

1. mRNA already present in dendrites (repressed state)
2. Activated synapse triggers translation of nearby mRNAs into protein

Distributed production

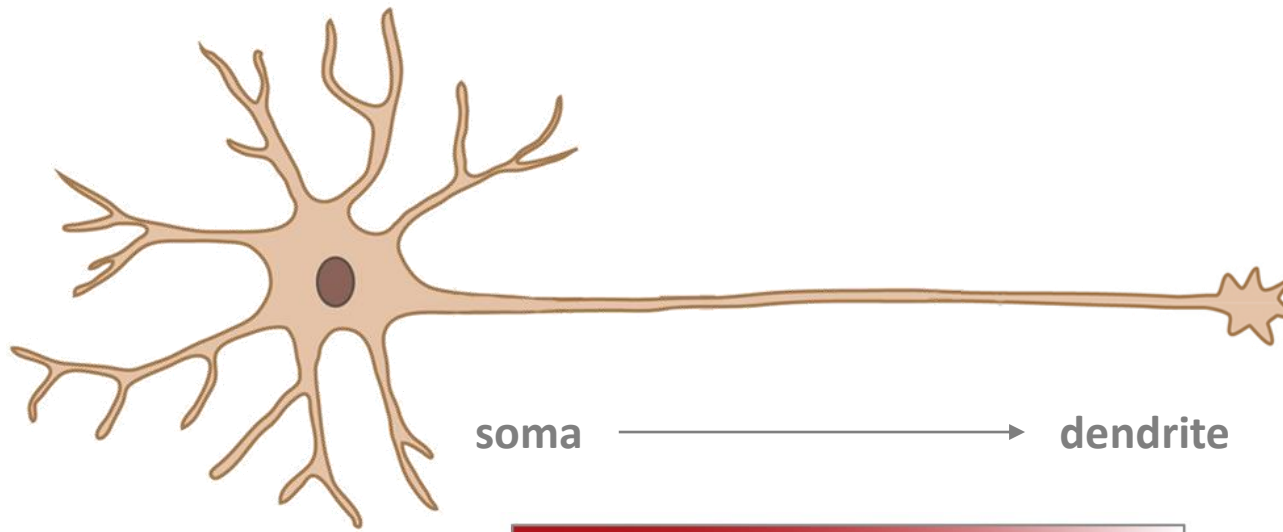

1. mRNA already present in dendrites (repressed state)
2. Activated synapse triggers translation of nearby mRNAs into protein

Distributed production

1. mRNA already present in dendrites (repressed state)
2. Activated synapse triggers translation of nearby mRNAs into protein

How is dendritic localization regulated?
(How does the cell control which RNAs are localized, and when?)

What we know so far

How can we identify RNA
structure motifs?

Main task:

Given a set of sequences with unknown structure, predict sub-regions that share a common structure (motif).

Main task:

Given a set of sequences with unknown structure, predict sub-regions that share a common structure (motif).

Main task:

Given a set of sequences with unknown structure, predict sub-regions that share a common structure (motif).

Complications:

- A sequence may have no motifs
- Boundary of individual motifs is unknown

Method 1: fold-and-compare

Method 2: align-and-fold

alignment score + structure conservation

NoFold: RNA structure clustering without folding or alignment

RNA sequences

NoFold: RNA structure clustering without folding or alignment

RNA sequences

score against

~2000 Known structures
Represented as covariance Models (CMs)

NoFold: RNA structure clustering without folding or alignment

RNA sequences

score against
